

EVG  **ACADEMY**
TECHNICAL
TRAINING

Our Technical Training Center spans 1,400 m², providing state-of-the-art facilities for advanced technical education. With a team of 18 experienced technical trainers and 19 fully equipped training rooms, including a workshop area, we offer an optimal environment for hands-on, industry-aligned learning. All our certified trainers and programs are based on the proven TTxTT methodology, ensuring consistent quality and effective learning outcomes.

Our training approach is built on:

- Research-based didactics for long-lasting knowledge retention
- Modern pedagogical principles tailored to technical learners
- Practical strategies applicable directly in real-world technical environments
- Training levels up to Tier 3 / Maintenance Training
- Programs customized to each customer's specific requirements

Extensive Hands-On Experience

Participants benefit from direct, practical training on a wide range of EVG equipment – from basic modules to highly complex high-volume-manufacturing (HVM) systems. Our small-group learning setup (up to 3 participants) encourages interaction, personalized guidance, and an optimal atmosphere for deep learning.

18 technical
trainers

19 equipment
training rooms

workshop area

All training programs fully comply with SEMI standards.

After successfully completing a course, participants receive an official certificate, along with the corresponding permissions and qualifications relevant to equipment operation or maintenance.

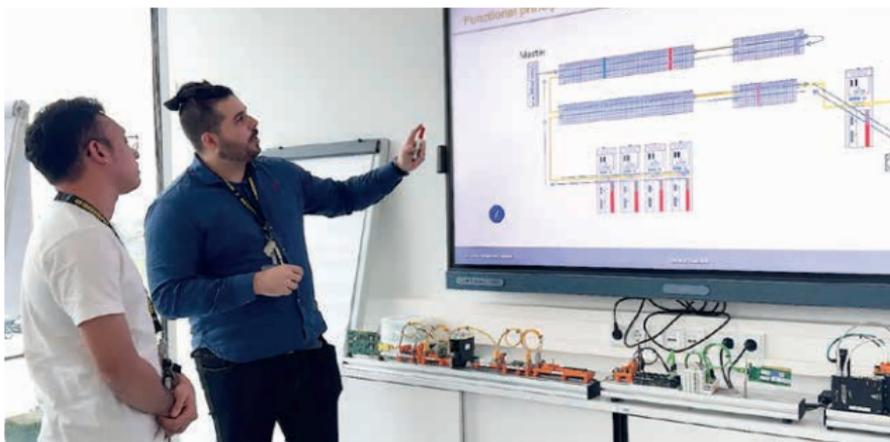

Software Training

In addition to our equipment-focused programs, we offer a wide range of system-independent software training courses. These sessions help participants build a solid understanding of essential software tools and workflows that are vital in today's technical environments—regardless of the equipment they use.

Held in a classroom setting, the courses provide a structured and supportive atmosphere where participants can explore software functions step by step, ask questions directly, and gain the practical confidence to apply their new skills effectively.

All software courses can be booked individually or combined with our equipment trainings, creating a flexible learning path that links software knowledge with hands-on experience. This modular approach allows each participant to shape their training journey—whether they want to deepen expertise, take on new responsibilities, or strengthen their overall technical foundation.
